

Further Research Pack

This folder groups research-oriented notes for future work on top of the current project.

Overview

File	Use
[`research_roadmap.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/research_roadmap.md)	Milestones
[`data_and_annotation_needs.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/data_and_annotation_needs.md)	Data collect
[`experiment_matrix.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/experiment_matrix.md)	Experiment
[`publication_directions.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/publication_directions.md)	Paper and t

Current Experiment Matrix Snapshot

The live dashboard and training pipeline now track a separate model-statistics hub plus the final test-lab comparison flow. For the latest tough benchmark snapshot, the active supervised model families are currently ranked as:

Rank	Model	Notes
1	`multimodal_attention`	Best overall selection in the latest run
2	`transformer`	Strong sequence-aware multimodal baseline
3	`vit`	Vision-heavy variant with a stronger weighted selection score than CNN

Older CNN and LSTM baselines remain in the catalog for historical comparison, but they are no longer part of the active three-model ranking snapshot.

Use `experimentmatrix.md`

(`/d:/Project/DyslexiaDetectionSystem/docs/furtherresearch/experiment_matrix.md`) for the more detailed experiment-by-experiment notes and to extend this table when you add new benchmark runs.

Recommended Reading Order

1. Research roadmap
1. Data and annotation needs
1. Experiment matrix
1. Publication directions
