

Further Research Pack

This folder groups research-oriented notes for future work on top of the current project.

Overview

| File | Use |

|

[`research\_roadmap.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/research_roadmap.md)

| Milestones and sequencing for future work |

|

[`data\_and\_annotation\_needs.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/data_and_annotation_needs.md)

| Data collection and labeling checklist |

|

[`experiment\_matrix.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/experiment_matrix.md)

| Experiment-by-experiment comparison matrix |

|

[`publication\_directions.md`](/d:/Project/Dyslexia_Detection_System/docs/further_research/publication_directions.md)

| Paper and thesis direction ideas |

Current Experiment Matrix Snapshot

The live dashboard and training pipeline now track a separate model-statistics hub plus the final

test-lab comparison flow. For the latest tough benchmark snapshot, the active supervised model

families are currently ranked as:

| Rank | Model | Notes |

| 1 | `multimodal\_attention` | Best overall selection in the latest run |

| 2 | `transformer` | Strong sequence-aware multimodal baseline |

| 3 | `vit` | Vision-heavy variant with a stronger weighted selection score than CNN |

Older CNN and LSTM baselines remain in the catalog for historical comparison, but they are no longer

part of the active three-model ranking snapshot.

Use experimentmatrix.md

(/d:/Project/DyslexiaDetectionSystem/docs/furtherresearch/experiment_matrix.md) for the more

detailed experiment-by-experiment notes and to extend this table when you add new benchmark runs.

Recommended Reading Order

1. Research roadmap

1. Data and annotation needs

1. Experiment matrix

1. Publication directions
